Cell and Gene
Therapy Solutions

Why You Should Partner With Us For Your Allogeneic Products

As a nationwide leader in the provision of allogeneic products for cell and gene therapy, the Red Cross can support your efforts from discovery through commercialization.

High Quality Source Material

- National Quality Management System and collections procedures, with strict adherence to protocols approved by our in-house IRB

Centralized Client Relationship Management

- Direct access to Cell and Gene Therapy Solutions product team and technical leads
- Centralized nationwide order management

Availability When You Need It

- Ability to collect and deliver on your timeline
- Same-day delivery post-collection available in multiple geographies

Extensive Testing Capabilities

- HLA, KIR, Immunophenotyping, Endotoxin, Standard and Expanded IDT testing available

Processing, Cryopreservation and Storage Capabilities

- Flexibility to implement your specific protocols
- Standard and expanded sterility testing capability
- Onsite processing labs allow for same-day processing and cryo-preservation post-collection

Customization Capability

- Customizable products to support you from discovery and development to clinical and commercial applications
- We accommodate specific donor requests such as BMI, ethnicity, age, lifestyle as well as specific apheresis collection parameters

Nationwide Footprint

- Nationwide collection sites with extensive and diverse IRB-consented donor pools and recallability
- Strong donor management experience and expertise, ensuring coverage and backup reliability

Scalability

- Ability to allow for rapid expansion to support clinical and commercial activity, ensures consistency with your processes as you scale from discovery through commercialization
